MODULES USED IN PROJECT

Student Module

The Student Module allows students to register, log in, and take part in placement activities through the Campus Placement Portal. It helps students view placement drives, apply for jobs, and check selection results.

Objectives:

- To allow student registration
- To provide secure login
- To display student information
- To enable drive applications
- To show selection results

FunctionalDescription:

1.Student Registration:

- Students register once with personal and academic details
- Data is stored in the database using Django ORM

2.Student Login:

- Students log in using credentials
- Django authentication validates login

3.Student Dashboard:

- Displays Profile, Available Drives, and Selected Students

4.Student Profile:

- Shows registered student details fetched from database

5.Available Drives:

- Displays all drives posted by admin
- Students can apply using "Apply Now"

6.Drive Application:

- Students apply for drives
- Duplicate applications are restricted

7.Selected Students:

- Displays list of selected students

Student Module Workflow:

1. Student registers
2. Student logs in
3. Dashboard is displayed
4. Drives are viewed
5. Student applies
6. Selection result is checked

Admin Module

The Admin Module is one of the core modules of the Campus Placement Portal. It is designed for the placement administrator to manage and control all placement-related activities. This module helps in maintaining student records, posting placement drives, monitoring applications, and publishing selected student details. **Objectives of the Admin Module:** The main objectives of the Admin Module are:

- To manage registered student details
- To post placement drive notifications
- To view students who applied for drives
- To publish selected students information
- To ensure smooth and organized placement operations

FunctionalDescription:

1. Admin Login:
   - The admin logs into the system using valid credentials.
   - Only authorized admin users can access the admin dashboard.
   - Django authentication is used to provide secure access.
2. Admin Dashboard:
   - After successful login, the admin is redirected to the admin dashboard.
   - The dashboard contains the following options:
   - View Registered Students
   - Post Drive Notice
   - Applied Students
   - Post Selected Students
3. View Registered Students:
   - The admin can view the list of all students registered in the portal.
   - Student details are fetched dynamically from the database.
   - This helps the admin to manage student information easily.
4. Post Drive Notice:

The admin can post placement drive details such as:

- Company name
- Job role
- Eligibility criteria
- Drive date
- The drive details are stored in the database using Django ORM.
- Posted drives are displayed in the student's available drives section.

5. Applied Students:
   - The admin can view students who have applied for placement drives.
   - Application details are displayed for review and selection.
   - This helps the admin in shortlisting candidates.

Admin Module Workflow

1. Admin logs into the system
2. Admin accesses the admin dashboard
3. Admin views registered students
4. Admin posts placement drive details
5. Admin checks applied students
6. Admin posts selected studentsgive as paragraph
